NeuroSleep

AI-Adaptive Sleep Pillow — Concept Overview

An early-stage concept, shared openly — not a confidential formal offering.

Why I'm Building This

I snore, and I've dealt with enough bad sleep — mine and other people's — to want to build something better than a passive pillow. I'm not a hardware engineer. This document reflects a concept I developed using AI tools: product direction, system design thinking, and market positioning. It is not a finished company, and I won't pretend it is.

The Problem

Insufficient sleep is one of the most commonly reported health complaints worldwide. Existing products are either passive comfort items or tracking-only tools — few close the loop between sensing and real-time physical adaptation.

The Concept

Pressure + PPG sensing, paired with an on-device AI model that adjusts support height, firmness, and temperature in real time. Companion app for reports and manual control.

Honest note on stage: *no clinical validation, no regulatory submission, and no diagnostic capability exist yet. These would be later milestones pursued with proper testing and the right partner — not claims to make at the concept stage.*

Market Context

Metric	Figure	Source
Global sleep tech devices market, 2025	~$29.6B	Mordor Intelligence
Global sleep tech devices market, 2026	~$34.7B	Mordor Intelligence
Projected market size, 2031	~$79.9B	Mordor Intelligence
CAGR, 2026–2031	~18%	Mordor Intelligence

Source: Mordor Intelligence, cross-checked against independent research firms in the same range.

Current Stage

Concept and system design direction only. No prototype, no patent, no team beyond the founder. This is stated plainly so there's no wasted time on either side.

What I'm Looking For

A technical co-founder, hardware/industrial design partner, or small manufacturer to build a first prototype together. Terms open for discussion once there's mutual interest — no specific ROI or exit timeline promised.
