NeuroSleep — Market Analysis

One consistent set of sourced figures, used everywhere else in this package.

1. Market Size

Metric	Figure	Source
Global sleep tech devices market, 2025	~$29.6B	Mordor Intelligence
Global sleep tech devices market, 2026	~$34.7B	Mordor Intelligence
Projected market size, 2031	~$79.9B	Mordor Intelligence
CAGR, 2026–2031	~18%	Mordor Intelligence

Source: Mordor Intelligence, Sleep Tech Devices Market report (accessed Sept 2026), cross-checked against four other independent market research firms (Research and Markets, Healthcare Foresights, SkyQuest, Coherent Market Insights), all clustering in the same range — which is what makes this figure usable rather than a single, unverifiable source.

2. Category Structure

The broader sleep tech market splits roughly into: passive comfort products (mattresses, pillows), tracking-only tools (wearables, sleep apps), and adaptive/closed-loop devices that sense and physically respond. NeuroSleep's concept sits in the third, smaller, newer sub-category.

3. Competitive Landscape

- Eight Sleep — mattress-level temperature control plus tracking; the closest analogue in market position.
- Moona / ChiliSleep — temperature-focused sleep accessories.
- Oura, ResMed — tracking and health-monitoring devices without physical adaptation.

These are real, funded competitors with market traction. NeuroSleep's differentiation — combining sensing and multi-parameter physical adaptation in a pillow form factor — is a hypothesis to be proven with a working prototype, not an established advantage.

4. Prevalence Claims — Handled Carefully

Specific figures on global insomnia prevalence or economic cost vary widely by source and methodology. Rather than cite a precise-sounding number without a solid citation, the safer and more honest claim is: poor sleep is one of the most commonly reported health complaints worldwide, and a significant driver of the broader digital health market.
