YIANG / NEUROSLEEP · CONFIDENTIAL PRELIMINARY DISCUSSION

NeuroSleep

Concept-stage sleep-support project · Strategic fit and outright asset-transfer enquiry

Overview. NeuroSleep explores a future combination of sleep-position sensing, adjustable neck support and a connected digital experience. It is presented for strategic evaluation by an established sleep, bedding, consumer-hardware or connected-product company.

What exists today

Digital presentation
Project website, brand direction, concept narrative and visual materials.

Concept film
Visual storytelling of the intended experience; not functioning hardware.

Concept documents
Product positioning, application hypotheses and preliminary architecture direction.

Browser demonstrator
Transparent rule-based simulation; not trained AI or validated control software.

Potential strategic relevance

Potentially relevant capabilities include smart pillows, mattresses, adjustable support mechanisms, sleep sensing, connected-home products, industrial design, embedded systems, apps and consumer-hardware manufacturing.

Home, hospitality, student living, mobility, travel, relaxation seating and healthcare-related research are application hypotheses only. No market demand or technical feasibility has been validated.

Current stage — important limitations

Concept stage only. No independently verified integrated hardware prototype, filed/granted patent, clinical validation, medical-device approval, validated proprietary AI model, demonstrated health benefit, revenue, paying customers, confirmed production supply chain or dedicated R&D team is claimed.

Sensing, actuation, algorithms, app and cloud functions remain proposed directions requiring independent engineering, safety, privacy, regulatory and commercial assessment. This is not a finished or market-ready medical product.

TRANSACTION DISCUSSION · ASSET SCOPE · DUE DILIGENCE

Preferred transaction

The owner primarily seeks an **outright cash transfer** of a defined set of verified and legally transferable project assets. Scope, consideration, exclusivity, payment milestones, delivery schedule and any transition support require a definitive written agreement.

Candidate deliverables — subject to verification

- Selected website source files and project presentation materials
- Original concept narrative, positioning and selected design documents
- Selected visual and concept-film materials only where rights permit
- Preliminary application-pathway and system-concept documents
- An agreed asset schedule, delivery manifest and file hashes

Exclusions and rights review

Third-party images, footage, music, fonts, icons, open-source components, generated assets, domains, hosting, social accounts and platform services are not automatically included. Items without adequate ownership or licence evidence will be excluded, replaced or separately licensed. No registered NeuroSleep trademark or patent right is represented.

Suggested evaluation process

1 · Fit check
Confirm buyer capabilities and interest in external concept assets.

2 · Confidentiality
Agree an NDA before sharing non-public files where appropriate.

3 · Diligence
Review asset inventory, authorship, third-party rights and limitations.

4 · Agreement
Agree price, scope, payment, delivery and support in writing.
